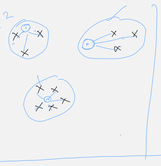
① Type of Problem

→ Classification
→ Regression
→ Reinforcement Learning
→ Mix

→ Dimensionality Red. ✓ "advance"
→ Clustering (kmeans)



Classification
- SVM ✓ - Poly.
- DT ✓
- SGD - LR ✓ - Polynom.
- RF / XGB / GB.
- Naive Bayes
- ANN
-

Reg
- Normal / OLS - LR
- SGD - LR
- RF / XGB / G. + Poly
- DT
- ANN
- Naive bay.
- SVM ✓

Interpretability
- DT
- ~~Random Forest~~ / XGB ✗
- SVM (Polynom / Ker)
- LR
- ANN ✗
- NB

$y = mx + c$

$y = a x_1 + b x_2 + c$

DT

Data Size

Huge
- Random forest (RF on parts of data)
- SGD
- NO OLS, DT, SVM
- ANN

Small
- SVM ✓
- OLS / Normal Eq.
- SGD
- DT
- NB.

On the Edge ~~Average~~ / (high)

- Very small.
- Very less Complex

$y = ax_1 + bx_2 + c$ "expected"

0 ; 1

Quad.
